APPLICATION RATES* (PINTS PER ACRE):

High Response Crops:	Row ¹	Banded ²
soybeans, sugar beets, beans, sorghum, barley, sudangrass, broccoli, spinach, table beets, tomatoes, cauliflower	1-3	2-5

Other Crops:	Row ¹	Banded ²
corn, wheat, alfalfa, oats, asparagus, cabbage, mint, sweet corn	1-2	2-4

Note: 1 pint of **NACHURS MicroBolt Fe** micronutrients contain: 0.056 pounds of elemental iron.

1. Row recommendations are intended to provide starter application of iron for the current year crop and are not expected to correct severe iron deficiencies. Additional banded or foliar applications may be necessary to correct severe deficiencies.
2. Banded generally refers to 2" to the side and 2" below the seed and is usually applied during planting.

FOLIAR FEEDING GENERAL GUIDELINES*:

For all the above crops including tree fruits, citrus, small fruits, and ornamentals: 1-2 pints/A in minimum 20 gallons of water

Aerial:
1-2 pints/A in minimum 5 gallons of water

NACHURS liquid fertilizer may be used as a carrier at 3-5 gallons per acre. More than one application may be required for severe deficiency.

NOTE: Foliar fertilization is intended as a supplement to a regular fertilization program and will not by itself provide all the nutrients normally required by agricultural crops.

NACHURS chelated micronutrients should not be used unless a deficiency is indicated by a soil test and/or tissue analysis, and/or appearance of deficiency symptoms. Optimum rate of application will vary between fields depending on soil pH and organic matter content.

MIXING INSTRUCTIONS:

1. Put 1/3 of water or fertilizer in tank
2. Add other chemicals (if applicable)
3. Fill tank with balance of water or fertilizer
4. Add correct amount of chelate (shake each container vigorously before use)
5. Agitate adequately to mix

Caution: Check compatibility with orthophosphates, high potash suspensions, and chemical mixtures.
